# Tries - Exercise 2

Code a method for the class Trie: **void** retrieve(std::string **prefix**)
That prints in the console all of the words that begin with a given **prefix**

Tries - Exercise 2

Code a method for the class Trie: **void** retrieve(std::string **prefix**)
That prints in the console all of the words that begin with a given **prefix**

Example:
prefix = ang

```
angel
angelina
anger
angie
angry
```
